

ACOPTIC - PAD3826

Pre-terminated risers Mod12

BENEFITS

- No welding at the bottom of the building
- Creates a point of flexibility on the ground level of the building
- Factory assembled and tested
- Full product traceability

APPLICATIONS

- The ACOME Home-PACe range is designed to meet the cabling needs of Telecom infrastructures for FTTH networks.
- The pre-terminated distribution cable is used for FTTH connections in building risers.
- The permanently accessible Home-PACe cable used allows for straight mid-span branching to be done at the floor-specific connection points. A splitting system makes installation in the connection boxes at the foot of the building particularly easy.
